

COMMITMENT TO SUSTAINABILITY

Currently, with the Group facing new challenges from its expansion and international growth, a review is being carried out into how it incorporates sustainability issues into its governance systems.

During 2007, the Group's mission, vision, values and policies were reviewed and Principles for Sustainable Development were developed for the Group. These were endorsed by the Board in early 2008.

As part of this process, two workshops were held in which representatives from the Group's operations discussed these issues with corporate vice presidents and Board members.
