

# THE ROAD TO SUSTAINABILITY

MESSAGE FROM MARCELO AWAD,  
CHIEF EXECUTIVE OFFICER  
OF ANTOFAGASTA MINERALS S.A.

Antofagasta Minerals S.A. (AMSA) has experienced significant growth in the past ten years. In order to manage this successfully, we have considered it critical to integrate environmental

and social considerations in our management model and processes to make mining a potential catalyst for change and a key factor in sustainable development.

We have adopted this approach across our operations and projects where we aim to apply high standards in management, production and environmental and social matters.

The path we are following is, however, a long term process. This year, the preparation of the Group's Principles for Sustainable Development was a key milestone for AMSA with more detailed social and environmental policies to be added over time.

This Sustainability Report shows our commitment to sustainable mining through the development of an economically successful business. We also strive for operational excellence, to be aware of our obligations to individuals, to respect the environment and to make a contribution to society under clear ethical guidelines. We hope it demonstrates our vision of sustainable mining to create value for society as a whole.
